

June 11, 2020 – For Immediate Release

Pass Powderkeg Ski Area, located in Crowsnest Pass, is excited to announce the extension of the Lower T-Bar lift. This extension will allow guests the opportunity to ski or ride from a new off-load area approximately 50-80m above the current off-load, improving the skiing and riding experience. The t-bar, originally installed in 1980, replaced a homemade ropetow constructed in the early 1950's.

Work to add the additional tower and length has begun with major construction to take place in August. This project will see an additional tower built to span the new length, a haul rope extension and extra spring boxes added.

"The extension of the Lower T-bar marks a major step to improve the ski and ride-ability of Pass Powderkeg Ski Area, and has been a long suggested project. I look forward to welcoming our guests back with this "new" lift!" said Katherine Seleski, Manager of Pass Powderkeg Ski Area.

This project is one of two major area enhancements in 2020, the second of which is the purchase of a 2020 Prinoth Bison X snowcat. The new snowcat will replace a 1991 Bombardier 400, with increased efficiency, added features and will provide improved terrain park and slope quality.
